EDUCATION

- Bachelor of Science (Hons) in Information Technology Sri Lanka Institute of Information Technology (SLIIT), Malabe Faculty of Computing
Expected Graduation: 2027
- Following the computing network course in Cisco Certified Network Associate (CCNA 200-301) via online (ongoing).
- MongoDB Database Admin Path (Self-Managed) MongoDB University | Completed: May 2026. Completed full learning path covering MongoDB Atlas.
- G.C.E. Advanced Level - Bio Technology Stream with ICT - 2022/2023
School : R/Sumana Balika Vidyalaya

TECHNICAL SKILLS

- Programming Languages:** C, C++, Java, Python
- Frameworks & Technologies:** Spring Boot, MERN Stack, HTML, CSS
- Tools:** R Studio, Anki Software, Packet Tracer and Flashcards, Figma, Eclipse, VS Code, Android Studio, MySQL Workbench, SQL Server, Postman, Management Studio, Dev C++

SOFT SKILLS

- Effective teamwork and strong communication
- Time management

YASINTHA WANASUNDARA

IT UNDERGRADUATE

PROFILE

Motivated and detail-oriented, seeking an internship opportunity in Front-end or Back-end software development, Web application development, or IT support. Passionate about building user-friendly and efficient web applications using modern technologies. Experienced in academic projects involving full-stack web development, CRUD operations, responsive UI design and database management. Quick to learn new technologies and want to gain new industry experience as an intern. Committed to applying academic knowledge to the practical industry while contributing positively to organizational success, and very motivated to improve quickly.

PROJECTS

- UniBridge - University support platform system** (FEBRUARY 2026 - APRIL 2026)
(Team project)
 - Technologies:** MERN Stack (MongoDB, Express.js, React, Node.js)
 - Contributed to an ITPM group project focused on micro tutoring session booking.
 - Engineered the session booking logic - tutors, students, availability slots, and booking constraints.
 - Backend Implementation: Developed RESTful APIs to handle CRUD operations for tutoring sessions, with validation logic to prevent double-booking of the same tutor.
 - Frontend Implementation: Built a responsive React-based user interface enabling students to browse available tutors and book sessions, while allowing tutors to manage and update their schedules efficiently.
 - Managed state with React hooks, integrated with MongoDB for session data storage, and collaborated via Git feature branching.
- Smart Campus Operations Hub - Booking Management Module** (FEBRUARY 2026 - APRIL 2026)
(Team Project)
 - Technologies:** Spring Boot, React, MongoDB, REST API, OAuth 2.0
 - Developed a complete Booking Management module for a university campus operations platform, handling resource scheduling (rooms, labs, equipment).
 - Implemented workflow-driven booking approval with automated conflict prevention using date/time overlap checks.
 - Built RESTful endpoints with proper HTTP status codes, validation, and role-based access (USER/ADMIN).
 - Designed React frontend UI for booking requests, approval/rejection with reason, and user-specific booking views.
- Mini projects (Individual)** (2025 JULY - DECEMBER)
 - Zen-energy Mobile app developed using Figma and Android Studio with Kotlin code.
 - Habit Core is a comprehensive Android wellness application designed to help users manage their daily health routines, track habits, log moods, and stay hydrated throughout the day. (Kotlin)
- EGG FARM MANAGEMENT SYSTEM** (2025 JULY - DECEMBER)
(TEAM PROJECT)
 - System is implemented using Eclipse IDE, MERN stack, and GitHub is also connected.
 - Order management function done and included order delivery.
 - Collaborate with the team on the system requirement documentation, collecting, storing, and processing data (Assignments, Activity)
- ONLINE TRANSPORT SYSTEM (TEAM PROJECT)** (2025 JANUARY - JUNE)
 - Developed Java-based modules.
 - Collaborated with the team on system requirement documentation.
 - Tested features and Collected feedback
 - Dispatch manager, functions included accepting ride requests.
- ONLINE FITNESS TRAINER SYSTEM (TEAM PROJECT)** (2024 JULY - DECEMBER)
 - Participated in system planning.
 - Designed Front-end using HTML/CSS and database setup using SQL Participated in system planning.
